# Odoo Website & ERP Integration Test Plan

Comprehensive Quality Assurance Document for Front-End & Back Office Synchronization

## 1. Introduction & Overview

### 1.1 Project Objective

The primary objective of this project is to execute comprehensive functional, non-functional, and integration testing on the Odoo Website and its back-end modules. The goal is to ensure high reliability, optimal user experience (UI/UX), data integrity, and seamless real-time synchronization between the customer-facing front-end and Odoo's Back Office ERP applications (Sales, CRM, Inventory) on a single database.

### 1.2 System Under Test - SUT

The Odoo Website System consists of two interconnected environments sharing a single database ("Same Data Architecture"):

- **Front-End / Customer-facing Portal:** Core components (Logo, Home, Authentication, My Account) and configurable modules (Shop, Events, Blog, Help, Appointments, Jobs, Connect Us).
- **Back-End / Back Office Modules:** Core enterprise management applications (Sales, CRM, Inventory).

## 2. Test Scope

| 2.1 In-Scope | 2.2 Out-of-Scope |
|---|---|
| • Authentication & Portal: Sign in / Create account / My Account.<br><br>• Navigation & Layout: Header, Footer, Logo, Responsiveness.<br><br>• Functional Modules: Shop, Events, Blog, Help, Appointments, Jobs, Currency Exchange.<br><br>• Data Integration: Direct conversion of orders into Sales Orders & Inventory stock deduction; conversion of contact forms into CRM Opportunities. | • Testing or modifying core Odoo framework underlying code (Odoo Core Architecture).<br><br>• Live payment gateway processing (testing is limited to staging/sandbox environments).<br><br>• High-volume load/stress testing beyond specified server capacity limits. |

## 3. Test Strategy & Types of Testing

| Test Type | Scope & Description |
|---|---|
| **Functional Testing** | Verification of all form submissions, interactive elements, menu links, and module workflows. |
| **Integration Testing** | Verification of real-time data sync between front-end actions and back-office apps (Sales, CRM, Inventory). |
| **UI/UX & Responsiveness** | Layout and visual alignment checks across mobile, tablet, and desktop viewports across major browsers. |
| **Security Testing** | Role-based access control (RBAC), authentication checks, and user session privacy in My Account. |
| **Usability Testing** | Assessing user flow smoothness during checkout, registration, and inquiry submissions. |

## 4. Test Environment Requirements

- **Database & Server:** Isolated staging environment (Staging/Test Database) seeded with realistic dummy data (Products, Users, Categories).
- **Supported Browsers:** Google Chrome, Microsoft Edge, Brave (latest stable versions).
- **Devices:** Windows and Android devices to verify layout responsiveness.
- **Defect Management Tools:** Jira, Selenium or Odoo's built-in issue tracking app for logging and managing bugs.

## 5. Entry & Exit Criteria

### 5.1 Entry Criteria

- Staging test environment is fully deployed, stable, and populated with test data.
- Initial module configurations and database setups are complete.
- Approved Test Plan and Test Cases are available and reviewed.

### 5.2 Exit Criteria

- 100% execution of all planned Critical and High priority test cases.
- Closure of all Blocker and Critical severity defects.
- Overall test pass rate reaches at least 95%.
- Final test execution summary report is generated and signed off by QA.

## 6. Deliverables

- **Test Plan Document:** Approved test strategy and project baseline.
- **Test Cases Matrix & Execution Logs:** Detailed step-by-step test scripts and results.
- **Defect Reports / Bug Log:** Logged defects tracked to resolution in the management tool.
- **Final Test Execution & Quality Summary Report:** Summary report covering quality readiness prior to Go-Live.

## 7. Risks & Mitigation Plan

| Identified Risk | Impact | Mitigation Strategy |
|---|---|---|
| Staging Environment Delay | High | Set up a local Odoo test instance to begin front-end UI test execution early. |
| Data Sync Failures between Front/Back Office | High | Perform dedicated end-to-end integration test passes and monitor Odoo server logs. |
| Scope Changes during Testing | Medium | Apply formal change management and adjust test schedules accordingly. |
| Unresponsive UI on Specific Viewports | Medium | Utilize automated cross-browser tools (e.g., BrowserStack) to detect device layout issues early. |

> **Sign-off Readiness**
